To realize safe and secure local communities without traffic accidents

We support the Sustainable Development Goals (SDGs).

Proposal for "Traffic Safety Classes" For the Safety and Security of Children

We protect children from traffic accidents!

The Foundation is a public interest incorporated foundation with the purpose of realizing "Traffic Accident Prevention."

Purpose of Traffic Safety Classes

We conduct various traffic safety activities with the aim of realizing safe and secure local communities without traffic accidents.

As one of these activities, we hold hands-on "traffic safety classes" at elementary, junior high, and senior high schools throughout Japan. Through traffic safety classes, we hope that children will recognize the importance of "traffic safety" by learning about traffic rules and the dangers of vehicles, and that this will lead to a reduction in traffic accidents.

財団法人小丸交通財団

Traffic Safety Classes

We hold traffic safety classes mainly at elementary schools throughout Japan to call for the prevention of traffic accidents by providing students with experience of the characteristics and dangers about trucks.

Traffic Safety Classes - Past Events/Results

Fiscal year	2021	2020	2019	2018	2017	2016	2015	2014	2013
Number of times held		9	13	15	6	3	6	1	1
Number of participant		1,475	3,995	2,861	1,078	432	942	153	219

Truck Experience Class [1]

"Blind Spot Experience"

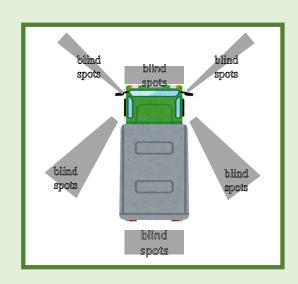

Children actually sit in a truck driver's seat to experience

"blind spots"

which cannot be seen by drivers of large and medium-sized trucks.

When children learn that it is difficult to see spots directly in front of the truck from a truck driver's seat, they will retain a strong memory of this through actual experience.

The Komaru Koutsu Foundation

Truck Experience Class [2]

"Experience about turning radius difference and overhangs"

Children will learn about:

- the danger of accidents involving turning due to turning radius difference; and
- the danger of being struck, etc., due to overhangs of large trucks

A truck moves while a traffic dummy, which is placed at an intersection, becomes involved in a turning accident with a rear wheel of the truck. It may be stimulating for children, but it leaves a strong impression with them about the dangers of turning radius difference.

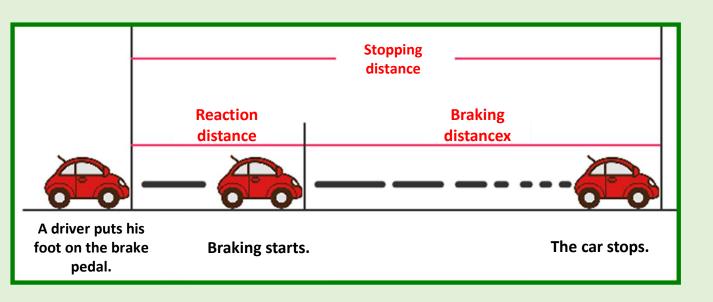

Truck Experience Class [3]

"Stopping Distance of Vehicles"

The distance from when the driver recognizes danger to when a vehicle (truck, passenger car, motorcycle, etc.) actually stops (stopping distance) is clearly explained to children.

Children learn that "vehicles cannot stop suddenly."

Truck Experience Class [4]

"Truck Riding Experience"

The Komaru Koutsu Foundation

Truck Experience Class [5]

"Others"

We respond to your requests!

[Example] Learning about the risk of distracted driving because many students commute to school by bicycle.

Truck Experience Class (Indoors) [1]

"Presentation using a dashcam"

Participants will learn about risk prediction through discussion while watching dashcam videos.

Example [1] Accident at an intersection with poor visibility

Example [2] Accident while riding a bicycle with an umbrella

Example [3] Accident when a truck makes a left turn

Truck Experience Class (Indoors) [2]

"Presentation using a bicycle simulator"

Using a bicycle simulator, participants learn about the rules and manners necessary to ride a bicycle safely and raise their traffic safety awareness.

The Komaru Koutsu Foundation

Lastly,

we, the Komaru-Koutsu Foundation, would like to help protect children from traffic accidents through our traffic safety classes.

We do our best to respond to your requests for traffic safety classes, and we hope that you will consider holding such classes.
